DESCRIPTORS: \*Plants (Botany), \*Genetics,  
Morphology (Biology), Seeds

It was found possible to successfully utilize hybridiza-  
tion of plants by means of grafting to obtain new fruitful  
types of plants. Grafting hybridization within a species  
and between species formed heterogeneous material,  
but its character was different. A graft within a species  
yielded offspring combining characteristics of the graft  
and the wilding, and even new growth, but grafting be-  
tween species--only new growth, which is defined by  
(Agriculture--Plant Cultivation, TT, v. 11, no. 9)(over)

\*Climatic factors, Soils, Humidity, Moisture, Weather  
stations, Snow, Wind, Grasses, Tobacco, Vegetables,  
Fruits, Diseases, Freezing, Forestry, Weather fore-  
casting, Climate

This book deals with problems of agrometeorology, the  
characteristics of field climate, the significance of  
weather in agricultural production, the influence of the  
soil moisture cycle and of moisture reserves on the  
life of cultivated plants, as well as harmful weather  
(Agriculture, TT, v. 7, no. 12) (over)
